Interactive Technical Highlights

Interactive Brokers offers many technical analysis tools to help evaluate the market and specific securities. This page gives a brief description of each tool and provides links to further details.

— **Real-time charts**

You can define parameters to display a real-time or historical line, bar or candlestick chart for any contract on your trading page, including currencies that trade on IDEAL.

— **Chart Studies**

Create a chart study for any underlying. Choose from moving averages, Bollinger bands, envelopes, Parabolic SAR, RSI, MACD, ADX/DMI, Stochastic Oscillator, On Balance Volume, ROC, Momentum, Average True Range, Ultimate Oscillator and the Williams Oscillator.

— **Market Scanner**

The Market Scanner automatically populates a pre-formatted trading page with related market data for stocks, bonds, futures and indexes based on specified criteria.

— **Tick and Trin Indices**

The Tick and Trin Index indicators show the difference between stock volume trading on the uptick and downtick, and the advances-to-declines spread divided by the volume of advances to declines.
